

I have seen how BPL clearly disrupts the Amateur Radio bands (www.ARRL.net & local recordings made in my area). I am very disappointed that the FCC has not taken more of a proactive attitude toward stopping something that is clearly interfering with an allowed and well earned frequency area. It looks to me like they are just 'looking the other way' and that is disappointing. Amateur Radio is one of the few 'hobbies' that has build into it 'building good will in the world' ; where the average citizen involved can make a real difference with emergency back up support in the event of a disaster or just bad storm ( Sky warn). How both handy cap, house bound, and blind people have a chance to connect with people all over the world and help out in disaster times where this would not be possible with out Amateur Radio, in this way. I just need to say as an American that I am very disappointed with the FCC not taking clearer action where it is the "right thing to do" to stop BPL and protect "us". Please recognize your mistake, just like I do when I make a mistake, own it and correct it! KI4CFS, new "Ham" Martin Brossman III
